

IT ServiceDesk - base desktop workflow

Hidden context = the operator's role. Blocks run in parallel (+), in sequence, or are skipped depending on the role.

Per-role variation of the base flow

Role	Triage	Diagnosis	On screen	Close
L1 agent	sequential	check_kb	—	resolve
L2 senior	parallel	check_kb run_diag remote	escalate	resolve close_noaction
L3 specialist	skipped	run_diag remote	escalate	skipped (hand back)
supervisor	parallel	check_kb	approve, force_close	resolve close_noaction force_close

 activity / block  gateway: + parallel (AND), × choice (XOR) || = concurrent | = exclusive choice

Enabled activities are read from screenshots; the action screen's menu carries the role's gated options, so kappa sees a per-role enabled signature.
